

Neato knows how to get your home clean.

The smartest, most powerful robot vacuum.

Neato Botvac D85

Everyday vacuuming on all floor types. Specially designed to pick up all types of hair—ideal for homes with pets.

Industry experts like CNET agree. Neato is best at picking up pet hair.

LaserSmart™ technology.

Uses laser technology to scan each room 360 degrees, identifying furniture, doorways, and stairs. It then creates a map and methodically cleans, moving from room to room in the most efficient way.

SpinFlow™ Power Clean system.

A combination of powerful suction and precision brushes. The Botvac D85 features a uniquely designed spiral blade brush that's best for cleaning all floor surfaces—hardwood, tile, and carpet—and a quieter combo brush that's best for picking up all types of hair. Ideal for homes with pets.

D-shape design and CornerClever™ technology.

Gets to where dirt hides—in corners and along walls.

Cleans on a schedule.

Easily schedule the robot to clean everyday—or on a schedule that works for you. You will enjoy coming home to that just-vacuumed look.

Extra-large bagless dirt bin.

Holds more and is right on top so it's easier to empty. Bagless, so it's environmentally friendly, too.

10MM

Cleans closer to the walls.

Neato cleans within 10mm of the walls and corners.

98MM

Round robots are 98mm away from the walls—and even further from the corners.

Neato Botvac™ D85

Cleans up to four times faster—so it can really go the distance.

Specifications

Robot Dimensions:

33.5 cm w x 32.1 cm l x 10 cm h

Package Dimensions:

39.8 cm w x 56.3 cm l x 13.9 cm. h

Package Weight: 7 kg.

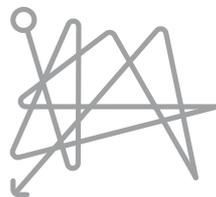

Part Number: 945-0174

Package Contents

High Performance Robot Vacuum
Integrated Charge Base
Power Cord
Spiral Blade Brush
Combo Brush
Side Brush
High-Performance Filter
Boundary Markers
Brush & Filter Cleaning Tool
Quick Start Guide

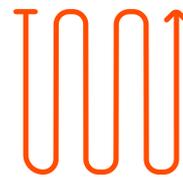

Other Robots

Other robots randomly bounce around the room.

Neato Robots

Neato scans and systematically cleans.

Neato uses LaserSmart technology to plan the most efficient course and clean in record time. Because it's not wasting energy bouncing around like round robots, it can clean more space on a single charge. If it needs more power, it automatically returns to the charge base, powers up, then goes back to finish the job.
