- Please read these instructions thoroughly and retain for future reference
- Manufactured to BS EN 442-1 Radiators and convectors
- Please ensure that the product is checked for damage prior to installation, any damage reported after installation will not be covered.
- The pipework must be flushed out to remove any debris which can affect the function of this product.
- A corrosion inhibitor should be used in your installation.

BTU & Wattage info-

Product Code	BTU	Wattage
REGC1200	662	194
REGMB1200	990	290
REGBB1200	679	199
REGENT1200	679	199

Parts

- A. 1 x Radiator
- B. 1 x Air Vent (Bleed Valve)
- C. 2 x Blanking Cap
- D. 12 x Wall plug
- E. 12 x Wall screw

Please note that Parts are for illustrative purposes only and may differ slightly to the actual product

Tools required

Spanner

Flathead screwdriver

Philips screwdriver

Tape measure

Drill

Spirit Level

Pencil

Sealing tape

Installation

Please note: Before starting any installation, turn off the water supply.

Please note: Before commencing any installation, the desired location should be checked before drilling, that no pipes or wires can be damaged.

First, prepare the water supply pipes to match up with the towel radiator and valve dimensions being used. Fit the radiator valve tail and nut into the towel rail (not supplied) (at both sides) and using sealing tape, tighten into position, then follow the installation below.

1. Fit the air vent and blanking cap in the towel rail, (add a little sealer tape to secure) and tighten using the spanner, be sure not to over-tighten.

2. Measure the distance between all the location holes and mark these on the wall in the required location, use a spirit level to ensure these are horizontally and vertically aligned.

3. Position the towel rail and screw into place using the screws provided.

Please note: You may need two people to connect the radiator, depending on the model purchased.

4. Using the drill to reinforce the screws.

5. Finally, fit the radiator valves to the pipework and connect to the radiator valve tail and tighten all connections.

IMPORTANT! The product is supplied un-filled.

The rail should be filled with a water (80%) and glycol (20%) mixture if **NOT** being connected to the central heating system, also allow 5% air gap.

After installation

- . After the above installation, turn on the water supply and using the flathead screwdriver, open the air vent via the central screw, open the inlet valve and let the water rush into the radiator. Check all connections for leaks.
- . Once water overflows from the air vent, this means that there will be no air bubbles present.
- . Use a screwdriver to close the air vent and then the radiator is ready to use.

Cleaning

This radiator is made from steel. To maintain the surface of your product (especially when subjected to steam or splashes), wipe with a clean damp cloth and wipe dry.

Do not use abrasive cleaning agents or materials which can strip and scratch the surface; the use of these agents or materials can invalidate your guarantee.

It is recommended to wipe and dry on a regular basis.
